

Unexpected \bar{A} -movement in West Circassian

Theoretical implications for syntactic ergativity

Ksenia Ershova

Stanford University

Princeton Symposium on Syntactic Theory 2022

What is syntactic ergativity

Defined broadly (Polinsky 2017:3):

“The presence of **syntactic rules** that group S and O (the absolutive) together, to the exclusion of A (the ergative).”

What is syntactic ergativity

Defined broadly (Polinsky 2017:3):

“The presence of **syntactic rules** that group S and O (the absolutive) together, to the exclusion of A (the ergative).”

S = subject of intransitive verb

O = object of transitive verb

A = subject of transitive verb

What is syntactic ergativity

Defined broadly (Polinsky 2017:3):

“The presence of **syntactic rules** that group S and O (the absolutive) together, to the exclusion of A (the ergative).”

S = subject of intransitive verb

O = object of transitive verb

A = subject of transitive verb

} **ABS**

Example: ERG cannot move in Q'anjob'al (Mayan)

* Maktxel max y-il —ERG ix ix?
who PFV A3-see CLF woman

Intended: 'Who saw the woman?'

Example: ERG cannot move in Q'anjob'al (Mayan)

* Maktxel max y-il —ERG ix ix?
who PFV A3-see CLF woman

Intended: 'Who saw the woman?'

***ERG WH-MOVT**

Example: ERG cannot move in Q'anjob'al (Mayan)

* Maktxel max y-il —ERG ix ix?
who PFV A3-see CLF woman

Intended: 'Who saw the woman?'

***ERG WH-MOVT**

Maktxel max y-il naq winaq —ABS ?
who PFV A3-see CLF man

'Who did the man see?'

Example: ERG cannot move in Q'anjob'al (Mayan)

* Maktxel max y-il —ERG ix ix?
who PFV A3-see CLF woman

Intended: 'Who saw the woman?'

***ERG WH-MOVT**

Maktxel max y-il naq winaq —ABS ?
who PFV A3-see CLF man

'Who did the man see?'

✓ABS WH-MOVT

(Coon et al. 2014, 2021; Tollan and Clemens 2021)

A class of approaches accounts for syntactic ergativity effects with **movement of ABS to a high position**.

Aldridge (2004, 2008); Coon et al. (2014, 2021); Tollan and Clemens (2021), a.o.

A class of approaches accounts for syntactic ergativity effects with **movement of ABS to a high position.**

Aldridge (2004, 2008); Coon et al. (2014, 2021); Tollan and Clemens (2021), a.o.

High absolutive

A class of approaches accounts for syntactic ergativity effects with **movement of ABS to a high position.**

Aldridge (2004, 2008); Coon et al. (2014, 2021); Tollan and Clemens (2021), a.o.

High absolutive

A class of approaches accounts for syntactic ergativity effects with **movement of ABS to a high position.**

Aldridge (2004, 2008); Coon et al. (2014, 2021); Tollan and Clemens (2021), a.o.

Raised ABS **blocks** ERG \bar{A} -movement:

High absolutive

A class of approaches accounts for syntactic ergativity effects with **movement of ABS to a high position.**

Aldridge (2004, 2008); Coon et al. (2014, 2021); Tollan and Clemens (2021), a.o.

Raised ABS **blocks** ERG \bar{A} -movement:

The main claim

- ▶ The ban on ergative wh-movement is taken to be the **defining property** of syntactically ergative languages.

The main claim

- ▶ The ban on ergative wh-movement is taken to be the **defining property** of syntactically ergative languages.
- ▶ Under existing accounts, ABS raising alone is **insufficient** to derive blocking of ERG.

The main claim

- ▶ The ban on ergative *wh*-movement is taken to be the **defining property** of syntactically ergative languages.
- ▶ Under existing accounts, ABS raising alone is **insufficient** to derive blocking of *ERG*.

Additional assumptions or analytical tools are required.

The main claim

- ▶ The ban on ergative wh-movement is taken to be the **defining property** of syntactically ergative languages.
- ▶ Under existing accounts, ABS raising alone is **insufficient** to derive blocking of ERG.

Additional assumptions or analytical tools are required.

- ▶ **This is a desirable aspect of high absolute analyses.**

The main claim

- ▶ The ban on ergative wh-movement is taken to be the **defining property** of syntactically ergative languages.
- ▶ Under existing accounts, ABS raising alone is **insufficient** to derive blocking of ERG.

Additional assumptions or analytical tools are required.

- ▶ **This is a desirable aspect of high absolutive analyses.**

The ban on ergative extraction is not necessarily *predicted* by high absolutive syntax, nor necessarily *predicts* high absolutive syntax.

The main claim

- ▶ The ban on ergative wh-movement is taken to be the **defining property** of syntactically ergative languages.
- ▶ Under existing accounts, ABS raising alone is **insufficient** to derive blocking of ERG.

Additional assumptions or analytical tools are required.

- ▶ **This is a desirable aspect of high absolutive analyses.**

The ban on ergative extraction is not necessarily *predicted* by high absolutive syntax, nor necessarily *predicts* high absolutive syntax.

Confirmed by West Circassian.

Ergative extraction in West Circassian

The ergative can \bar{A} -move in West Circassian:

Ergative extraction in West Circassian

The ergative can \bar{A} -move in West Circassian:

č'alew [—**ERG** əš velosjəped
boy his brother bicycle
Ø-Ø-je-**zə**-tə-ɐe] -r
3ABS-3SG.IO-DAT-**WH.ERG**-give-PST -ABS

‘the boy who gave a bicycle to his brother’

✓**ERG WH-MOVT**

Ergative extraction in West Circassian

The ergative can \bar{A} -move in West Circassian:

č'alew [—ERG əš velosjəped
boy his brother bicycle
Ø-Ø-je-zə-tə-ɐe] -r
3ABS-3SG.IO-DAT-WH.ERG-give-PST -ABS

‘the boy who gave a bicycle to his brother’ ✓ERG WH-MOVT

BUT displays a number of other syntactic ergativity effects

1. ABS binds ERG and IO reciprocals, and not vice versa (Ershova 2019, 2021b)

Broader syntactic ergativity in West Circassian

1. ABS binds ERG and IO reciprocals, and not vice versa (Ershova 2019, 2021b)

High absolutive languages

In **high absolutive** languages, the ABS object raises to a position above the ERG agent:

The raised absolutive:

High absolutive languages

In **high absolutive** languages, the ABS object raises to a position above the ERG agent:

The raised absolutive:

- ▶ should be detectable by syntactic rules that are sensitive to structural superiority

High absolutive languages

In **high absolutive** languages, the ABS object raises to a position above the ERG agent:

The raised absolutive:

- ▶ should be detectable by syntactic rules that are sensitive to structural superiority
- ▶ does not necessarily block ergative extraction

How the high absolutive blocks ergative extraction

Two prominent approaches:

How the high absolutive blocks ergative extraction

Two prominent approaches:

1. raised ABS intervenes between wh-probe and ERG
(Aldridge 2004, 2008; Coon et al. 2021)

How the high absolutive blocks ergative extraction

Two prominent approaches:

1. raised ABS intervenes between wh-probe and ERG (Aldridge 2004, 2008; Coon et al. 2021)
2. ERG movement over raised ABS is a violation of the Constraint on Crossing Dependencies (Tollan and Clemens 2021)

How the high absolutive blocks ergative extraction

Two prominent approaches:

1. raised ABS intervenes between wh-probe and ERG (Aldridge 2004, 2008; Coon et al. 2021)
2. ERG movement over raised ABS is a violation of the Constraint on Crossing Dependencies (Tollan and Clemens 2021)

Ergative extraction is blocked by a combination of raised absolutive + additional language-specific assumptions.

How the high absolutive blocks ergative extraction

Two prominent approaches:

1. raised ABS intervenes between wh-probe and ERG
(Aldridge 2004, 2008; Coon et al. 2021)
2. ERG movement over raised ABS is a violation of the
Constraint on Crossing Dependencies (Tollan and Clemens 2021)

Ergative extraction is blocked by a combination of
raised absolutive + additional language-specific assumptions.

High absolute intervenes

Coon et al. (2021):

High absolute intervenes

Coon et al. (2021):

- ▶ ABS object raises to Spec,vP

High absolutive intervenes

Coon et al. (2021):

- ▶ ABS object raises to Spec,vP
- ▶ ABS intervenes for ERG wh-movement

High absolutive intervenes

Coon et al. (2021):

► ABS object raises to Spec,vP

► ABS intervenes for ARG wh-movement

because wh-C is *relativized* for [WH] and [D]

High absolutive intervenes

Coon et al. (2021):

► ABS object raises to Spec,vP

► ABS intervenes for ERG wh-movement

because wh-C is *relativized* for [WH] and [D]

High absolute intervenes

Coon et al. (2021):

► ABS object raises to Spec,vP

► ABS intervenes for ERG wh-movement

because wh-C is *relativized* for [WH] and [D]

High absolute intervenes

Coon et al. (2021):

► ABS object raises to Spec, vP

► ABS intervenes for ERG wh-movement

because wh-C is *relativized* for [WH] and [D]

High absolute intervenes

Coon et al. (2021):

► ABS object raises to Spec,vP

► ABS intervenes for ERG wh-movement

because wh-C is *relativized* for [WH] and [D]

► relativized probe is *language-specific*

High absolutive intervenes

Coon et al. (2021):

► ABS object raises to Spec,vP

► ABS intervenes for ERG wh-movement

because wh-C is *relativized* for [WH] and [D]

► relativized probe is *language-specific*

In most languages, the wh-probe is not relativized for [D].
Predicts high ABS languages with no ban on ERG extraction.

How the high absolutive blocks ergative extraction

Two prominent approaches:

1. raised ABS intervenes between wh-probe and ERG
(Aldridge 2004, 2008; Coon et al. 2021)
2. ERG movement over raised ABS is a violation of the
Constraint on Crossing Dependencies (Tollan and Clemens 2021)

How the high absolutive blocks ergative extraction

Two prominent approaches:

1. raised ABS intervenes between wh-probe and ERG
(Aldridge 2004, 2008; Coon et al. 2021)

Does not predict that ERG extraction constraint is necessary property of high absolutive languages.

2. ERG movement over raised ABS is a violation of the Constraint on Crossing Dependencies (Tollan and Clemens 2021)

How the high absolutive blocks ergative extraction

Two prominent approaches:

1. raised ABS intervenes between wh-probe and ERG
(Aldridge 2004, 2008; Coon et al. 2021)

Does not predict that ERG extraction constraint is necessary property of high absolutive languages.

2. ERG movement over raised ABS is a violation of the Constraint on Crossing Dependencies (Tollan and Clemens 2021)

Constraint on Crossing Dependencies

Tollan and Clemens (2021):

Constraint on Crossing Dependencies

Tollan and Clemens (2021):

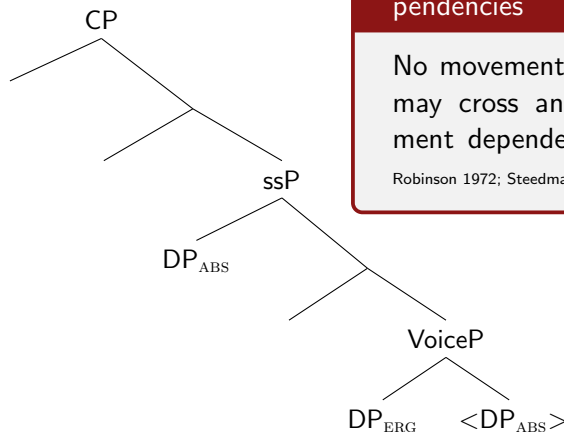

Constraint on Crossing Dependencies

No movement dependency may cross another movement dependency. (Kuno and

Robinson 1972; Steedman 1985, a.o.)

Constraint on Crossing Dependencies

Tollan and Clemens (2021):

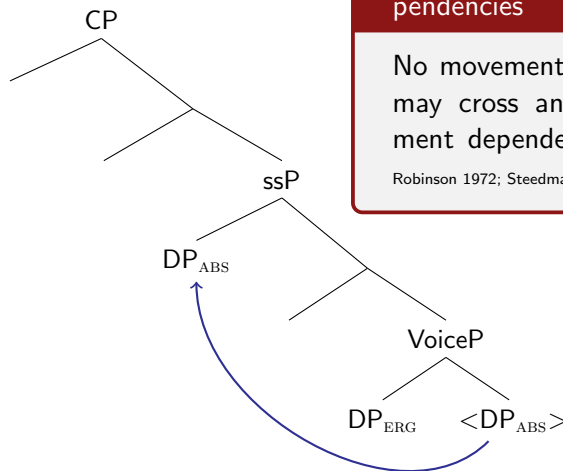

Constraint on Crossing Dependencies

No movement dependency may cross another movement dependency. (Kuno and

Robinson 1972; Steedman 1985, a.o.)

Constraint on Crossing Dependencies

Tollan and Clemens (2021):

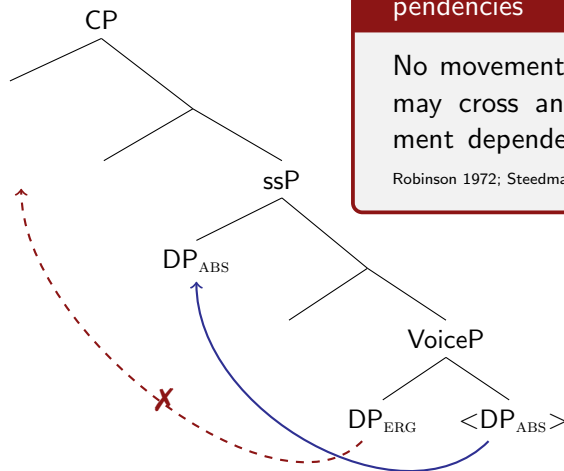

Constraint on Crossing Dependencies

No movement dependency may cross another movement dependency. (Kuno and

Robinson 1972; Steedman 1985, a.o.)

Constraint on Crossing Dependencies

Tollan and Clemens (2021):

Constraint on Crossing Dependencies

No movement dependency may cross another movement dependency. (Kuno and

Robinson 1972; Steedman 1985, a.o.)

Constraint on Crossing Dependencies is not universal

Tollan and Clemens (2021): there are well-known counterexamples

Constraint on Crossing Dependencies is not universal

Tollan and Clemens (2021): there are well-known counterexamples

- ▶ Dutch clause-final verb clusters

Constraint on Crossing Dependencies is not universal

Tollan and Clemens (2021): there are well-known counterexamples

- ▶ Dutch clause-final verb clusters
- ▶ Bulgarian multiple wh-movement

Constraint on Crossing Dependencies is not universal

Tollan and Clemens (2021): there are well-known counterexamples

- ▶ Dutch clause-final verb clusters
- ▶ Bulgarian multiple wh-movement

⇒ Predicts *tendency* for high absolutive languages to display ergative extraction constraint.

Constraint on Crossing Dependencies is not universal

Tollan and Clemens (2021): there are well-known counterexamples

- ▶ Dutch clause-final verb clusters
- ▶ Bulgarian multiple wh-movement

⇒ Predicts *tendency* for high absolutive languages to display ergative extraction constraint.

Does not predict universal correlation between high absolutive and ergative extraction constraint.

Constraint on Crossing Dependencies is not universal

Tollan and Clemens (2021): there are well-known counterexamples

- ▶ Dutch clause-final verb clusters
- ▶ Bulgarian multiple wh-movement

⇒ Predicts *tendency* for high absolutive languages to display ergative extraction constraint.

Does not predict universal correlation between high absolutive and ergative extraction constraint.

Allows for possibility of high ABS language without a ban on crossing dependencies, i.e. no ban ERG extraction.

How the high absolutive blocks ergative extraction

Two prominent approaches:

1. raised ABS intervenes between wh-probe and ERG
(Aldridge 2004, 2008; Coon et al. 2021)

Does not predict that ERG extraction constraint is necessary property of high absolutive languages.

2. ERG movement over raised ABS is a violation of the Constraint on Crossing Dependencies (Tollan and Clemens 2021)

How the high absolutive blocks ergative extraction

Two prominent approaches:

1. raised ABS intervenes between wh-probe and ERG
(Aldridge 2004, 2008; Coon et al. 2021)

Does not predict that ERG extraction constraint is necessary property of high absolutive languages.

2. ERG movement over raised ABS is a violation of the Constraint on Crossing Dependencies (Tollan and Clemens 2021)

Predicts *tendency* for high absolutive to correlate with ergative extraction constraint.

Leaves space for counterexamples.

High absolute in the broader syntax

High absolutive in the broader syntax

- ▶ Raised absolutive does not necessarily block ergative extraction.

High absolutive in the broader syntax

- ▶ Raised absolutive does not necessarily block ergative extraction.
- ▶ High position of ABS should affect syntactic rules which are sensitive to c-command.

High absolutive in the broader syntax

- ▶ Raised absolutive does not necessarily block ergative extraction.
- ▶ High position of ABS should affect syntactic rules which are sensitive to c-command.

Both predictions confirmed by West Circassian.

High absolutive in the broader syntax

- ▶ Raised absolutive does not necessarily block ergative extraction.
- ▶ High position of ABS should affect syntactic rules which are sensitive to c-command.

Both predictions confirmed by West Circassian.

High absolutive diagnosed in three novel domains:

High absolutive in the broader syntax

- ▶ Raised absolutive does not necessarily block ergative extraction.
- ▶ High position of ABS should affect syntactic rules which are sensitive to c-command.

Both predictions confirmed by West Circassian.

High absolutive diagnosed in three novel domains:

- ▶ reciprocal binding

High absolutive in the broader syntax

This talk

The ergative extraction constraint is not necessarily *predicted* by high absolutive syntax, nor necessarily *predicts* high absolutive syntax.

High absolutive \nRightarrow ergative extraction constraint

The movement of ABS to a position higher than ERG does not straightforwardly predict the ergative extraction constraint.

High absolutive \nRightarrow ergative extraction constraint

The movement of ABS to a position higher than ERG does not straightforwardly predict the ergative extraction constraint.

Additional assumptions are required:

High absolutive \nRightarrow ergative extraction constraint

The movement of ABS to a position higher than ERG does not straightforwardly predict the ergative extraction constraint.

Additional assumptions are required:

- ▶ relativized wh-probe (Coon et al. 2021)

High absolutive \nRightarrow ergative extraction constraint

The movement of ABS to a position higher than ERG does not straightforwardly predict the ergative extraction constraint.

Additional assumptions are required:

- ▶ relativized wh-probe (Coon et al. 2021)
- ▶ constraint on crossing dependencies (Tollan and Clemens 2021)

High absolutive \nRightarrow ergative extraction constraint

The movement of ABS to a position higher than ERG does not straightforwardly predict the ergative extraction constraint.

Additional assumptions are required:

- ▶ relativized wh-probe (Coon et al. 2021)
- ▶ constraint on crossing dependencies (Tollan and Clemens 2021)

This is a desirable prediction.

High absolutive \nRightarrow ergative extraction constraint

The movement of ABS to a position higher than ERG does not straightforwardly predict the ergative extraction constraint.

Additional assumptions are required:

- ▶ relativized wh-probe (Coon et al. 2021)
- ▶ constraint on crossing dependencies (Tollan and Clemens 2021)

This is a desirable prediction.

West Circassian is a high absolutive language without an ergative extraction constraint.

Ergative extraction constraint \nRightarrow high absolutive

Raised ABS is not the only way to derive the ban on ergative wh-movement.

Ergative extraction constraint \nRightarrow high absolutive

Raised ABS is not the only way to derive the ban on ergative wh-movement.

Approaches based on properties of ERG:

(Otsuka 2006, 2017; Deal 2016; Polinsky 2016)

Ergative extraction constraint \nRightarrow high absolutive

Raised ABS is not the only way to derive the ban on ergative wh-movement.

Approaches based on properties of ERG:

- ▶ ERG cannot move because of case or structural position

(Otsuka 2006, 2017; Deal 2016; Polinsky 2016)

Ergative extraction constraint \nRightarrow high absolutive

Raised ABS is not the only way to derive the ban on ergative wh-movement.

Approaches based on properties of ERG:

- ▶ ERG cannot move because of case or structural position
- ▶ ABS remains low and does not interact with ergative extraction

(Otsuka 2006, 2017; Deal 2016; Polinsky 2016)

Ergative extraction constraint \nRightarrow high absolutive

Raised ABS is not the only way to derive the ban on ergative wh-movement.

Approaches based on properties of ERG:

- ▶ ERG cannot move because of case or structural position
- ▶ ABS remains low and does not interact with ergative extraction

(Otsuka 2006, 2017; Deal 2016; Polinsky 2016)

The main takeaway

- ▶ The Ergative Extraction Constraint is possible in low absolutive languages.

Ergative extraction constraint \nRightarrow high absolutive

Raised ABS is not the only way to derive the ban on ergative wh-movement.

Approaches based on properties of ERG:

- ▶ ERG cannot move because of case or structural position
- ▶ ABS remains low and does not interact with ergative extraction

(Otsuka 2006, 2017; Deal 2016; Polinsky 2016)

The main takeaway

- ▶ The Ergative Extraction Constraint is possible in low absolutive languages.
- ▶ High absolutive syntax does not predict the Ergative Extraction Constraint.
