

What it means to be a subject

Evidence from a syntactically ergative language

Ksenia Ershova

Stanford University

7 February 2020

The main claim

- ▶ **SUBJECT** is not a syntactic primitive

The main claim

- ▶ **SUBJECT** is not a syntactic primitive
- ▶ **syntactically ergative** languages provide particularly good evidence for this

The main claim

- ▶ **SUBJECT** is not a syntactic primitive
- ▶ **syntactically ergative** languages provide particularly good evidence for this

Syntactic ergativity:

The main claim

- ▶ **SUBJECT** is not a syntactic primitive
- ▶ **syntactically ergative** languages provide particularly good evidence for this

Syntactic ergativity:

2 subject positions

The main claim

- ▶ **SUBJECT** is not a syntactic primitive
- ▶ **syntactically ergative** languages provide particularly good evidence for this

Syntactic ergativity:

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

1. binds reflexive pronouns and cannot itself be bound

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

1. binds reflexive pronouns and cannot itself be bound

The cat washed **herself**.

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

1. binds reflexive pronouns and cannot itself be bound

The cat washed **herself**.

A blue horizontal line with a downward-pointing bracket on the left and an upward-pointing arrow on the right connects the words 'The cat' and 'herself'. Below this line, the word 'BINDING' is written in blue capital letters.

BINDING

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

1. binds reflexive pronouns and cannot itself be bound

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

1. binds reflexive pronouns and cannot itself be bound

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

1. binds reflexive pronouns and cannot itself be bound

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

2. is PRO in control constructions

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

2. is PRO in control constructions

The cat wants **PRO** to catch **the mouse**.

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

2. is PRO in control constructions

SUBJECT

The cat wants **PRO** to catch **the mouse**.

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

2. is PRO in control constructions

SUBJECT

The cat wants **PRO** to catch **the mouse**.

- * The mouse wants **the cat** to catch **PRO**.

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

2. is PRO in control constructions

SUBJECT

The cat wants **PRO** to catch **the mouse**.

* The mouse wants **the cat** to catch **PRO**

XSUBJECT

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

3. takes wider scope than other elements

No one saw **anything**.

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

3. takes wider scope than other elements

No one saw **anything**.

NEG > **NPI**

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

3. takes wider scope than other elements

No one saw **anything**.

NEG > **NPI**

* **Anyone** saw **nothing**.

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

3. takes wider scope than other elements

No one saw **anything**.

NEG > **NPI**

* **Anyone** saw **nothing**.

NPI < **NEG**

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

3. takes wider scope than other elements

What is a subject?

Usually defined as the constituent displaying a constellation of syntactic properties (e.g. Keenan 1976):

3. takes wider scope than other elements

4. etc.

What is a subject?

In tree-geometric terms, implemented as **structural prominence**:

What is a subject?

In tree-geometric terms, implemented as **structural prominence**:

What is a subject?

In tree-geometric terms, implemented as **structural prominence**:

- ▶ Harley (1995); Bobaljik and Jonas (1996); McCloskey (1997), a.o.: A clause contains **several subject positions**.

Deconstructed subjecthood

- ▶ Harley (1995); Bobaljik and Jonas (1996); McCloskey (1997), a.o.: A clause contains **several subject positions**.
- ▶ The subject **moves through them** in the course of the derivation.

Subjecthood properties are distributed across several positions

Subjecthood properties are distributed across several positions

Subjecthood properties are distributed across several positions

Subjecthood properties are distributed across several positions

- A nominal “collects” subjecthood properties by moving through the different positions (e.g. Poole 2015).

Subjecthood properties are distributed across several positions

- A nominal “collects” subjecthood properties by moving through the different positions (e.g. Poole 2015).

Subjecthood properties are distributed across several positions

- A nominal “collects” subjecthood properties by moving through the different positions (e.g. Poole 2015).

Subjecthood properties are distributed across several positions

- ▶ A nominal “collects” subjecthood properties by moving through the different positions (e.g. Poole 2015).

single nominal moves through the subject positions

Subjecthood properties are distributed across several positions

- ▶ A nominal “collects” subjecthood properties by moving through the different positions (e.g. Poole 2015).

single nominal moves through the subject positions

obscures connection between syntactic position and subjecthood properties

A subject is not defined by its syntactic position

A subject acquires subjecthood properties by moving through several syntactic positions.

A subject is not defined by its syntactic position

A subject acquires subjecthood properties by moving through several syntactic positions.

A subject cannot be defined by a single syntactic position.

A subject is not defined by its syntactic position

A subject acquires subjecthood properties by moving through several syntactic positions.

A subject cannot be defined by a single syntactic position.

The next question:

Can a subject be defined as **a single nominal** within a given clause?

A subject is not defined by its syntactic position

A subject acquires subjecthood properties by moving through several syntactic positions.

A subject cannot be defined by a single syntactic position.

The next question:

Can a subject be defined as **a single nominal** within a given clause?

[clause DP₁ DP₂ DP₃ ...]

A subject is not defined by its syntactic position

A subject acquires subjecthood properties by moving through several syntactic positions.

A subject cannot be defined by a single syntactic position.

The next question:

Can a subject be defined as **a single nominal** within a given clause?

A prediction of deconstructed subjecthood

- ▶ Generally, **a single nominal** moves through the different subject positions.

A prediction of deconstructed subjecthood

- Generally, **a single nominal** moves through the different subject positions.

A prediction of deconstructed subjecthood

- Generally, **a single nominal** moves through the different subject positions.

A prediction of deconstructed subjecthood

- ▶ Generally, **a single nominal** moves through the different subject positions.
- ▶ **BUT** what if the subject positions are occupied by different nominals?

A prediction of deconstructed subjecthood

- ▶ Generally, **a single nominal** moves through the different subject positions.
- ▶ **BUT** what if the subject positions are occupied by different nominals?

Subjecthood properties are distributed across several nominals

Subjecthood properties are distributed across several nominals

Different nominals in different subject positions

If this is possible:

- ▶ **confirmation** for distributed subjecthood properties

Different nominals in different subject positions

If this is possible:

- ▶ **confirmation** for distributed subjecthood properties
- ▶ subject \neq single syntactic position
- ▶ subject \neq single nominal

Different nominals in different subject positions

If this is possible:

- ▶ **confirmation** for distributed subjecthood properties
- ▶ subject \neq single syntactic position
- ▶ subject \neq single nominal

Subject is not a theoretically meaningful notion.

Control singles out highest nominal in theta-domain

Control singles out highest nominal in theta-domain

The explanation:

Control is mediated by
Voice

Control singles out highest nominal in theta-domain

The explanation:

Control is mediated by
Voice

parallels between reflexives
and control

Control singles out highest nominal in theta-domain

The explanation:

Control is mediated by
Voice

parallels between reflexives
and control

- confirms importance of Voice in subjecthood diagnostics

Control singles out highest nominal in theta-domain

The explanation:

Control is mediated by
Voice

parallels between reflexives
and control

- confirms importance of Voice in subjecthood diagnostics
- explains lack of sensitivity to clause-level structural prominence

Control singles out ergative agent as subject

- (Ershova 2019b): control verbs embed CP with high **ABS**

Control singles out ergative agent as subject

- ▶ (Ershova 2019b): control verbs embed CP with high **ABS**
- ▶ for transitive verb (**ERG-ABS**):

Control singles out ergative agent as subject

- ▶ (Ershova 2019b): control verbs embed CP with high **ABS**
- ▶ for transitive verb (**ERG-ABS**):
 - ▶ **ERG** is controlled

Control singles out ergative agent as subject

- ▶ (Ershova 2019b): control verbs embed CP with high **ABS**
- ▶ for transitive verb (**ERG-ABS**):
 - ▶ **ERG** is controlled
 - ▶ **ABS** cannot be controlled

Control targets ergative agent

'The teacher began to count the children.'

Control cannot target absolutive theme of transitive verb

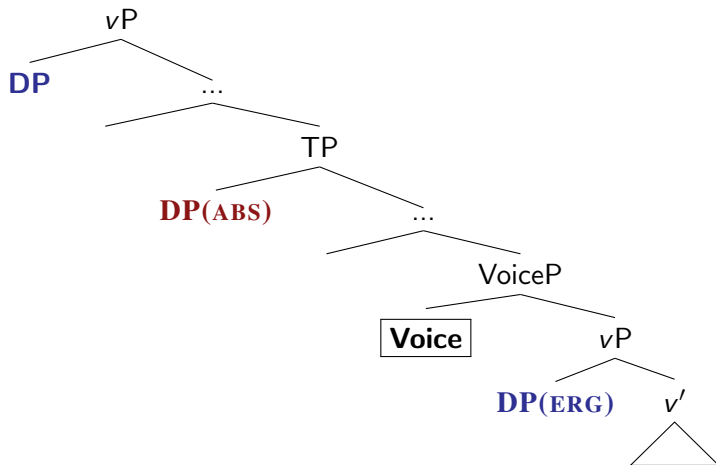

lit. 'The children began for the teacher to count [them].'

Why does control target the ergative agent?

- ▶ Why is ERG eligible for control?
- ▶ why doesn't ABS act as an intervener?

As a syntactically ergative language, West Circassian:

provides support for theories of distributed subjecthood

- ▶ in **syntactically accusative languages**, the same nominal moves through the different subject positions

The notion of subjecthood

As a syntactically ergative language, West Circassian:

provides support for theories of distributed subjecthood

- ▶ in **syntactically accusative languages**, the same nominal moves through the different subject positions
⇒ effects of distributed subjecthood only observable in limited contexts

The notion of subjecthood

As a syntactically ergative language, West Circassian:

provides support for theories of distributed subjecthood

- ▶ in **syntactically accusative languages**, the same nominal moves through the different subject positions
⇒ effects of distributed subjecthood only observable in limited contexts
- ▶ in **syntactically ergative languages**, the different subject positions are systematically occupied by distinct nominals

The notion of subjecthood

As a syntactically ergative language, West Circassian:

provides support for theories of distributed subjecthood

- ▶ in **syntactically accusative languages**, the same nominal moves through the different subject positions
⇒ effects of distributed subjecthood only observable in limited contexts
- ▶ in **syntactically ergative languages**, the different subject positions are systematically occupied by distinct nominals
⇒ fruitful testing ground for distribution of subjecthood properties

The notion of subjecthood

As a syntactically ergative language, West Circassian:

provides evidence for a radical decomposition of subjecthood

The notion of subjecthood

As a syntactically ergative language, West Circassian:

provides evidence for a radical decomposition of subjecthood

2 subject positions

The notion of subjecthood

As a syntactically ergative language, West Circassian:

provides evidence for a **radical decomposition of subjecthood**

2 subject positions

+

occupied by 2 distinct
nominals

The notion of subjecthood

As a syntactically ergative language, West Circassian:

provides evidence for a **radical decomposition of subjecthood**

2 subject positions

+

occupied by 2 distinct
nominals

⇒

SUBJECT is not a theoretically
meaningful notion

The role of Voice in subjecthood diagnostics

Voice plays an important role in a two classic subjecthood diagnostics:

The role of Voice in subjecthood diagnostics

Voice plays an important role in a two classic subjecthood diagnostics:

- ▶ reflexives

The role of Voice in subjecthood diagnostics

Voice plays an important role in a two classic subjecthood diagnostics:

- ▶ reflexives
- ▶ control

The role of Voice in subjecthood diagnostics

Voice plays an important role in a two classic subjecthood diagnostics:

- ▶ reflexives
 - ▶ control
-
- ▶ best observed in syntactically ergative languages

Voice plays an important role in a two classic subjecthood diagnostics:

- ▶ reflexives
 - ▶ control
-
- ▶ best observed in syntactically ergative languages
 - ▶ in syntactically accusative languages, can be seen in limited contexts:

Voice plays an important role in a two classic subjecthood diagnostics:

- ▶ reflexives
 - ▶ control
-
- ▶ best observed in syntactically ergative languages
 - ▶ in syntactically accusative languages, can be seen in limited contexts:
 - ▶ local subject oriented reflexives
(Labelle 2008; Sportiche 2014; Ahn 2015, a.o.)

Voice plays an important role in a two classic subjecthood diagnostics:

- ▶ reflexives
 - ▶ control
-
- ▶ best observed in syntactically ergative languages
 - ▶ in syntactically accusative languages, can be seen in limited contexts:
 - ▶ local subject oriented reflexives
(Labelle 2008; Sportiche 2014; Ahn 2015, a.o.)
 - ▶ quirky subjects (Poole 2015)

Local subject orientation of reflexives is reduced to constraints on locality.

Local subject orientation of reflexives is reduced to constraints on locality.

- ▶ support for locality-based analyses
(Sportiche 2014; Ahn 2015; Bhatia and Poole 2016, a.o.):

Local subject orientation of reflexives is reduced to constraints on locality.

- ▶ support for locality-based analyses (Sportiche 2014; Ahn 2015; Bhatia and Poole 2016, a.o.):
any argument may be antecedent, if it is the highest in the theta-domain

Local subject orientation of reflexives is reduced to constraints on locality.

- ▶ support for locality-based analyses (Sportiche 2014; Ahn 2015; Bhatia and Poole 2016, a.o.):
any argument may be antecedent, if it is the highest in the theta-domain
- ▶ confirms implicit prediction of Voice-based analyses:

Local subject orientation of reflexives is reduced to constraints on locality.

- ▶ support for locality-based analyses (Sportiche 2014; Ahn 2015; Bhatia and Poole 2016, a.o.):
any argument may be antecedent, if it is the highest in the theta-domain
- ▶ confirms implicit prediction of Voice-based analyses:
 - ▶ in syntactically accusative languages, antecedent must be **both deep and surface subject**

Local subject orientation of reflexives is reduced to constraints on locality.

- ▶ support for locality-based analyses (Sportiche 2014; Ahn 2015; Bhatia and Poole 2016, a.o.):
any argument may be antecedent, if it is the highest in the theta-domain
- ▶ confirms implicit prediction of Voice-based analyses:
 - ▶ in syntactically accusative languages, antecedent must be **both deep and surface subject**
 - ▶ this is epiphenomenal to syntax of Voice

Local subject orientation of reflexives is reduced to constraints on locality.

- ▶ support for locality-based analyses (Sportiche 2014; Ahn 2015; Bhatia and Poole 2016, a.o.):
any argument may be antecedent, if it is the highest in the theta-domain
- ▶ confirms implicit prediction of Voice-based analyses:
 - ▶ in syntactically accusative languages, antecedent must be **both deep and surface subject**
 - ▶ this is epiphenomenal to syntax of Voice
 - ▶ in syntactically ergative languages, antecedent **need not** be the surface subject

- ▶ cross-linguistically, control very rarely (if at all) displays syntactic ergativity effects
See e.g. Dixon (1994); Deal (2016); Polinsky (2016).

- ▶ cross-linguistically, control very rarely (if at all) displays syntactic ergativity effects
See e.g. Dixon (1994); Deal (2016); Polinsky (2016).
- ▶ explained by role of Voice in control:

- ▶ cross-linguistically, control very rarely (if at all) displays syntactic ergativity effects
See e.g. Dixon (1994); Deal (2016); Polinsky (2016).
- ▶ explained by role of Voice in control:
control is only sensitive to the organization of arguments in vP

Broader connections: typology of anaphor binding

Broader connections: typology of anaphor binding

- ▶ contrast between reflexives and reciprocals in binding restrictions is common:

Broader connections: typology of anaphor binding

- ▶ contrast between reflexives and reciprocals in binding restrictions is common:
even in same language, reflexives are often subject-oriented and reciprocals are not

Broader connections: typology of anaphor binding

- ▶ contrast between reflexives and reciprocals in binding restrictions is common:
even in same language, reflexives are often subject-oriented and reciprocals are not
- ▶ West Circassian anaphors fit into this general typology

Broader connections: typology of anaphor binding

- ▶ contrast between reflexives and reciprocals in binding restrictions is common:
even in same language, reflexives are often subject-oriented and reciprocals are not
- ▶ West Circassian anaphors fit into this general typology
- ▶ **The bigger question:** why this contrast between reflexives and reciprocals?

Broader connections: Austronesian subjects

- ▶ Tagalog: subjecthood properties are distributed across two nominals

Broader connections: Austronesian subjects

- ▶ Tagalog: subjecthood properties are distributed across two nominals
- ▶ \Rightarrow two types of subjects:

Broader connections: Austronesian subjects

- ▶ Tagalog: subjecthood properties are distributed across two nominals
- ▶ \Rightarrow two types of subjects:
 - ▶ grammatical subject

Broader connections: Austronesian subjects

- ▶ Tagalog: subjecthood properties are distributed across two nominals
- ▶ \Rightarrow two types of subjects:
 - ▶ grammatical subject
 - ▶ argument structure subject

Broader connections: Austronesian subjects

- ▶ Tagalog: subjecthood properties are distributed across two nominals
- ▶ \Rightarrow two types of subjects:
 - ▶ grammatical subject
 - ▶ argument structure subject

See e.g. Schachter (1977); Guilfoyle et al. (1992); Manning (1996).

Broader connections: Austronesian subjects

- ▶ Tagalog: subjecthood properties are distributed across two nominals
- ▶ \Rightarrow two types of subjects:
 - ▶ grammatical subject
 - ▶ argument structure subject

See e.g. Schachter (1977); Guilfoyle et al. (1992); Manning (1996).

Current proposal:

Broader connections: Austronesian subjects

- ▶ Tagalog: subjecthood properties are distributed across two nominals
- ▶ \Rightarrow two types of subjects:
 - ▶ grammatical subject
 - ▶ argument structure subject

See e.g. Schachter (1977); Guilfoyle et al. (1992); Manning (1996).

Current proposal:

- ▶ contribution to the empirical landscape

Broader connections: Austronesian subjects

- ▶ Tagalog: subjecthood properties are distributed across two nominals
- ▶ \Rightarrow two types of subjects:
 - ▶ grammatical subject
 - ▶ argument structure subject

See e.g. Schachter (1977); Guilfoyle et al. (1992); Manning (1996).

Current proposal:

- ▶ contribution to the empirical landscape
- ▶ dichotomy of subject types is not necessary

Broader connections: Austronesian subjects

- ▶ Tagalog: subjecthood properties are distributed across two nominals
- ▶ \Rightarrow two types of subjects:
 - ▶ grammatical subject
 - ▶ argument structure subject

See e.g. Schachter (1977); Guilfoyle et al. (1992); Manning (1996).

Current proposal:

- ▶ contribution to the empirical landscape
- ▶ dichotomy of subject types is not necessary
- ▶ subjecthood properties are defined by structural prominence and syntactic domain, not as primitives

Thank you!
