# Locality domains: the broad consensus

(Chomsky 2000, 2001, 2008; Abels 2003, 2012; Rackowski and Richards 2005; Müller 2010, 2011; Bošković 2014, 2015, 2016; van Urk 2020, among many others)

# Locality domains: the broad consensus

- ▶ Agreement and movement are constrained by **locality domains**

(Chomsky 2000, 2001, 2008; Abels 2003, 2012; Rackowski and Richards 2005; Müller 2010, 2011; Bošković 2014, 2015, 2016; van Urk 2020, among many others)

# Locality domains: the broad consensus

- ▶ Agreement and movement are constrained by **locality domains** = **phases**

(Chomsky 2000, 2001, 2008; Abels 2003, 2012; Rackowski and Richards 2005; Müller 2010, 2011; Bošković 2014, 2015, 2016; van Urk 2020, among many others)

# Locality domains: the broad consensus

- ▶ Agreement and movement are constrained by **locality domains** = **phases**
- ▶ Movement must be **successive-cyclic** through the **edge** of the phase to “escape” an opaque locality domain.

(Chomsky 2000, 2001, 2008; Abels 2003, 2012; Rackowski and Richards 2005; Müller 2010, 2011; Bošković 2014, 2015, 2016; van Urk 2020, among many others)

# Movement must be successive-cyclic

*What do you think that John bought?*

# Movement must be successive-cyclic

*What do you think that John bought?*

**What** do you ~~what~~ think ~~what~~ that John ~~what~~ bought ~~what~~?

# Movement must be successive-cyclic

*What do you think that John bought?*

**What** do you **what** think **what** that John **what** bought **what**?

# Movement must be successive-cyclic

# Why are phases opaque for movement?

# Why are phases opaque for movement?

Broadly speaking, **two types of theories**:

# Why are phases opaque for movement?

Broadly speaking, **two types of theories**:

1. Phases are **spellout domains**

# Why are phases opaque for movement?

Broadly speaking, **two types of theories**:

1. Phases are **spellout domains**

⇒ movement limited by interface conditions

# Why are phases opaque for movement?

Broadly speaking, **two types of theories**:

1. Phases are **spellout domains**

⇒ movement limited by interface conditions

- ▶ transfer to PF → opacity for syntactic operations

(e.g. Uriagereka 1999, 2012; Chomsky 2001, 2008)

# Why are phases opaque for movement?

Broadly speaking, **two types of theories**:

## 1. Phases are **spellout domains**

⇒ movement limited by interface conditions

- ▶ transfer to PF → opaqueness for syntactic operations

(e.g. Uriagereka 1999, 2012; Chomsky 2001, 2008)

- ▶ phases are linearized at spellout

→ movement constrained by linear order

(Fox and Pesetsky 2005)

# Why are phases opaque for movement?

Broadly speaking, **two types of theories**:

## 1. Phases are **spellout domains**

⇒ movement limited by interface conditions

- ▶ transfer to PF → opacity for syntactic operations

(e.g. Uriagereka 1999, 2012; Chomsky 2001, 2008)

- ▶ phases are linearized at spellout

→ movement constrained by linear order

(Fox and Pesetsky 2005)

## 2. Phases are **interveners for Agree**

(Abels 2003; Rackowski and Richards 2005; van Urk and Richards 2015; Halpert 2019)

# Approach 1: Spellout domains are opaque

Chomsky (2000) *et seq.*:

# Approach 1: Spellout domains are opaque

Chomsky (2000) *et seq.*:

Phases are **barriers for movement**

# Approach 1: Spellout domains are opaque

Chomsky (2000) *et seq.*:

Phases are **barriers for movement**

because their complements are **spelled out**.

# Approach 1: Spellout domains are opaque

Chomsky (2000) *et seq.*:

Phases are **barriers for movement**

because their complements are **spelled out**.

Transfer to PF  $\Rightarrow$  syntactic opacity

# Approach 1: Spellout domains are opaque

Chomsky (2000) *et seq.*:

Phases are **barriers for movement**

because their complements are **spelled out**.

Transfer to PF  $\Rightarrow$  syntactic opacity

# Approach 1: Spellout domains are opaque

Chomsky (2000) *et seq.*:

- ▶ Spellout domains: DP and CP

# Evidence from dynamic domains

Syntactic locality domains are dynamic

# Evidence from dynamic domains

Syntactic locality domains are dynamic

Syntactic locality domains can be **voided by agreement**

# Evidence from dynamic domains

Syntactic locality domains are dynamic

Syntactic locality domains can be **voided by agreement**

← Principle of Minimal Compliance (Richards 1998)

# Evidence from dynamic domains

Syntactic locality domains are dynamic

Syntactic locality domains can be **voided by agreement**

← Principle of Minimal Compliance (Richards 1998)

*Example:  $C$  agrees with  $vP \Rightarrow C$  can probe into  $vP$*

# Evidence from dynamic domains

Syntactic locality domains are dynamic

Syntactic locality domains can be **voided by agreement**

← Principle of Minimal Compliance (Richards 1998)

*Example:  $C$  agrees with  $vP \Rightarrow C$  can probe into  $vP$*

**In West Circassian:**

# Evidence from dynamic domains

Syntactic locality domains are dynamic

Syntactic locality domains can be **voided by agreement**

← Principle of Minimal Compliance (Richards 1998)

*Example:  $C$  agrees with  $vP \Rightarrow C$  can probe into  $vP$*

**In West Circassian:**

Further embedding makes extraction **more accessible!**

# Evidence from dynamic domains

Syntactic locality domains are dynamic

Syntactic locality domains can be **voided by agreement**

← Principle of Minimal Compliance (Richards 1998)

*Example:  $C$  agrees with  $vP \Rightarrow C$  can probe into  $vP$*

**In West Circassian:**

Further embedding makes extraction **more accessible!**

$\Rightarrow$  Locality domains are not opaque due to PF transfer.

# Locality domains $\neq$ spellout domains

# Locality domains $\neq$ spellout domains

- ▶ Syntactic opacity  $\nRightarrow$  transfer to PF

# Locality domains $\neq$ spellout domains

- ▶ Syntactic opaqueness  $\nRightarrow$  transfer to PF
- ▶ Locality domains  $\neq$  prosodic domains

# Locality domains $\neq$ spellout domains

- ▶ Syntactic opacity  $\nRightarrow$  transfer to PF
- ▶ Locality domains  $\neq$  prosodic domains

**In West Circassian:**

# Locality domains $\neq$ spellout domains

- ▶ Syntactic opacity  $\nRightarrow$  transfer to PF
- ▶ Locality domains  $\neq$  prosodic domains

## In West Circassian:

syntax-to-PF mapping rules are defined over DP and CP,

# Locality domains $\neq$ spellout domains

- ▶ Syntactic opacity  $\nRightarrow$  transfer to PF
- ▶ Locality domains  $\neq$  prosodic domains

## In West Circassian:

syntax-to-PF mapping rules are defined over DP and CP,  
**but not vP and ApplP!**

# The view from polysynthesis

# The view from polysynthesis

Dynamic phasehood in West Circassian is connected to **polysynthesis** ( $\sim$  rules of complex word formation):

# The view from polysynthesis

Dynamic phasehood in West Circassian is connected to **polysynthesis** ( $\sim$  rules of complex word formation):

- ▶ **polypersonal  $\varphi$ -probes** are **licensed by Agree** with  $C^0$

# The view from polysynthesis

Dynamic phasehood in West Circassian is connected to **polysynthesis** ( $\sim$  rules of complex word formation):

- **polypersonal  $\varphi$ -probes** are **licensed by Agree** with  $C^0$   
Agree with  $C^0$  **can render phases transparent for probing**

# The view from polysynthesis

Dynamic phasehood in West Circassian is connected to **polysynthesis** ( $\sim$  rules of complex word formation):

- ▶ **polypersonal  $\varphi$ -probes** are **licensed by Agree** with  $C^0$   
Agree with  $C^0$  **can render phases transparent for probing**
- ▶ **syntax-to-prosody rules** map **phrasal constituents to phonological words**

# The view from polysynthesis

Dynamic phasehood in West Circassian is connected to **polysynthesis** ( $\sim$  rules of complex word formation):

- ▶ **polypersonal  $\varphi$ -probes** are **licensed by Agree** with  $C^0$   
Agree with  $C^0$  **can render phases transparent for probing**
- ▶ **syntax-to-prosody rules** map **phrasal constituents to phonological words**  
these constituents are identifiable as **spellout domains**

No phase between C and TP

⇒ ABS and POSS are equidistant

⇒ POSS<sub>ABS</sub> can move

## ✗ possessor of ERG

vP is closer to C than POSS

⇒ POSS<sub>ERG</sub> cannot move

## ✗ possessor of IO

AppIP is closer to v than POSS

⇒ POSS<sub>IO</sub> cannot move

## ✓ possessor of PP complement!

PP is not at a phase edge

⇒ v can agree with POSS<sub>PP</sub>

**Agree with  $C^0$**  can render phases transparent for probing

Clausebound possessor extraction is ungrammatical,  
but long-distance possessor extraction is fine!

- ▶ **syntax-to-prosody rules** map phrasal constituents to phonological words (Ershova 2020)  
These constituents are identifiable as spellout domains

Phases (vP and ApplP) are spelled out differently  
depending on the larger spellout domain (CP or DP).

# Thank you!

- ▶ West Circassian consultants: Svetlana K. Alishaeva, Saida Gisheva, Susana K. Khatkova, and Zarema Meretukova
- ▶ Audiences at MIT LingLunch, Leipzig Universität, CYCLOPS-Colloquium at Leipzig University, and the Morphology and Syntax Workshop at UChicago
- ▶ Funding sources:
  - ▶ Dissertation Research Improvement Grant from the National Science Foundation (BCS-1749299)
  - ▶ Association for Slavic, East European, and Eurasian Studies Dissertation Research Grant
  - ▶ Andrew W. Mellon Fellowship of Scholars in the Humanities at Stanford University
- ▶ This talk relies heavily on Ershova (2020) and Ershova (2024). Thanks to everyone who helped with the papers (too many to list!)

- ▶ **Closest** (modified from Rackowski and Richards 2005:579; my additions in **boldface**)

A goal  $\alpha$  is the closest one to a given probe if there is no distinct goal  $\beta$  such that for some **distinct**  $X$  ( $X$  a head or maximal projection),  $X$  c-commands **or dominates**  $\alpha$  but does not c-command **or dominate**  $\beta$ .

- ▶ **Additional assumptions** (Rackowski and Richards 2005:582)

- ▶ A probe must Agree with the **closest** goal  $\alpha$  that **can move**.
- ▶ A goal  $\alpha$  **can move** if it is a phase.
- ▶ Once a probe  $P$  is related by Agree with a goal  $G$ ,  $P$  can ignore  $G$  for the rest of the derivation (Richards 1998; Hiraiwa 2001).

(Ershova 2024)
